

Computational Intelligence (CI) – Internship

(40 hours/week – 3 months)

Challenges you will solve:

- You will participate in our discussions with companies and academics.
- You will analyze the current state of technology in the market for Social CRM tools.
- You will present and discuss solutions on how to improve existing systems and how to convey this knowledge in the academic environment.
- You will develop components together with our international research partners for solutions in research projects and for analysis of Big Data and Social Network.
- You will help us develop solutions aligned with best practices in the field of Software Engineering, especially prototyping and test-first programming.
- You will support the institute as well as its international activities and current partnerships.

Why you would fit this position:

- You are studying Software Engineering.
- You have following programming skills: R Prog., Python, Java, Map Reduce
- You speak English fluently (German and/or Portuguese are a plus)
- You are interested in cross-cultural research projects.

What you can expect:

- Enjoy the environment of a fast-growing research organization.
- Work in a motivated and ambitious team.
- Challenging professional and personal responsibilities.

Who we are:

The Social CRM Research Center e.V. is an independent, non-profit institute headquartered in Leipzig, Germany. We work on publicly and privately funded research projects by connecting researchers, companies, system providers and students.
